

To Group or Not to Group? Evidence from Mutual Funds

Saurin Patel & Sergei Sarkissian

Asian Bureau for Financial and Economic Research
Singapore, May 20-25, 2013

Fund management structure evolution

Trend in fund management structure

“Mutual fund star managers have gone the way of the vinyl record: They're cool to have, expensive to get, and sometimes, not the best quality. In their place, fund companies ... are moving in favor of a team-oriented approach. Even Fidelity Investments, home of one of the first star managers, Peter Lynch, has switched some funds to a team-managed approach. The move helps fund companies defend against poaching, protect their funds' returns, and shield themselves from the level of outflows seen at competing firms after their high-profile stars have flamed out.”

Reuters, Dec 2, 2011

Outline

- ◆ Motivation
- ◆ Differences between Morningstar and CRSP datasets
- ◆ The impact of team on fund performance
- ◆ Impact of teams on risk taking and fund characteristics
- ◆ Conclusion

The value of a group: Is it there?

◆ No!

- ❖ Teams lead to “risky shifts” and “group polarization” (Kerr, 1992)
- ❖ Teams induce “groupthink” (Janis, 1982)
- ❖ Teams bring “free riding” (Holmström, 1982; Rasmusen, 1987)

◆ Yes!

- ❖ Teams help diversification of style and judgment (Sharpe 1981)
- ❖ Teams may reduce portfolio risk (Barry & Starks, 1984)
- ❖ Teams increase productivity (Hamilton, et al., 2003)
- ❖ Teams arrive to less extreme decisions (Adams & Ferreira, 2010)

Related mutual fund literature:

◆ Teams are bad (use CRSP data):

- ❖ Chen et al. (2004)
- ❖ Bar et al. (2010)
- ❖ Han et al. (2008)

◆ Teams are similar to single managers (use MS data):

- ❖ Massa et al. (2010)
- ❖ Bliss et al. (2008)

Two hypotheses & predictions

- ◆ H1: Fund performance is higher among team-managed funds.
 - ❖ P1. Fund performance is non-linear in the number of team members.
 - ❖ P2. Fund performance is higher among team-managed funds located in larger cities.

- ◆ H2: Team-managed funds do not take excessive risk.

Main findings

- ◆ There are large discrepancies in managerial structures between CRSP and Morningstar databases reaching on average 20% per year.
- ◆ Team-managed funds:
 - ❖ Have higher risk-adjusted returns than single-managed funds,
 - ❖ Are not riskier than single-managed funds,
 - ❖ Generate extra fund flows,
 - ❖ Exhibit large cross-sectional variations in the extent of gains.

Data sources and sample properties

- ◆ **Source:** Morningstar Direct, CRSP
- ◆ **Fund types:** US domestic equity (no index or specialty)
- ◆ **Time period:** 1992-2010
- ◆ **Number of unique funds:** 3,935
- ◆ **Number of manager-fund-year observations:**
35,440
- ◆ **Performance metrics:** 4-factor alpha (unconditional and conditional)

Fund-level characteristics

- ◆ **Size** – TNA of the fund
- ◆ **Age** – the fund's age since its inception year
- ◆ **Family size** – TNA of the fund's family
- ◆ **Expenses** – total expense ratio of the fund
- ◆ **Turnover** – annual trading rate
- ◆ **Volatility** – standard deviation of monthly net fund returns over the past 12 months
- ◆ **Flows** – net growth in TNA of the fund
- ◆ **Location** – financial center dummy

Manager-level characteristics

- ◆ **Tenure** – the number of years the fund manager remains with the fund
- ◆ **SAT** – the SAT score of matriculates of the fund manager's undergraduate institution
- ◆ **MBA** – a dummy which equals one if at least one manager of the fund has an MBA degree
- ◆ **Age** – fund manager's age in the current year

Misspesification CRSP: Example

Cross-sectional properties of teams

◆ Team size:

- ❖ Productivity of teams is high but diminishes with more members (Hamilton et al., 2003)
- ❖ Three-member teams are necessary and sufficient for solving highly intellectual problems (Laughlin et al., 2006)

◆ Team location:

- ❖ Large cities enable better transfer of information and knowledge (Jacobs, 1969; Christoffersen & Sarkissian, 2009)

◆ Team heterogeneity (mixed findings):

- ❖ Enhances information processing skills (Hamilton et al., 2003) but raises social frictions (Jehn et al. 1999).

Conclusions

- ◆ Mutual funds provide an ideal setting for the analysis of group versus individual behavior and performance.
- ◆ Collective decision making is beneficial.
- ◆ The benefits of team management are sensitive to:
 - ❖ Team size
 - ❖ Team location
 - ❖ Team diversity

Team work trend in finance research

◆ Source: Patel (2012)
