The IMF in April had pencilled in a 3 per cent contraction of gross domestic product for Singapore this year. Since then, the Ministry of Trade and Industry has lowered its 2020 growth forecast range for Singapore to minus 4 per cent to minus 7 per cent. Dr Gopinath said that for most of Asia, lower oil prices, success in containing the spread of the virus and low vulnerability to external shocks in terms of financing needs and debt stress would be positives. Asia’s deep integration with the Chinese economy, where “containment has worked very well”, could also provide a “mild positive” for the region, she added.

At the same time, the open economies of Asia will be hit by the major contraction in international trade, she said, predicting that global trade may contract by 10 per cent this year.

The IMF chief economist warned of broader threats to globalisation beyond the current crisis. The United States-China trade war, political tensions in Hong Kong and other geopolitical risks may have big implications for global supply chains and allocation of production going forward, she noted.

While the challenge to keep capital flowing has been to some extent addressed by easing monetary conditions, it is still a vulnerability for the region. “If things get worse, Asia could have turned in the financial markets again,” she said.

Most economies in the region and worldwide have started to reopen, but they should be prepared for subsequent waves of infections, and hence it would be advisable to reopen in phases, she said. Singapore this month entered the first stage of its three-phased reopening and has announced four budgets this year to protect jobs and businesses. However, Dr Gopinath said that as there is no solution to the health crisis so far, some sectors – such as those related to hospitality – may remain unviable worldwide for a longer period.

“The policy then has to shift from trying to keep workers matched to their sectors to realigning them to businesses that are actually growing and have the potential to absorb them,” she said, adding that it will not be possible for governments to support all firms to stay afloat if the crisis drags on.

“There is going to be a time when countries will have to make difficult choices about which systemically or strategically important firms to preserve and which ones to let go,” she said.

Still, Dr Gopinath noted that the crisis has opened up some opportunities. “There is a possibility that technology and innovation can happen much faster and that could play a role with raising productivity,” she said.

The forum, which is usually held live as a series of in-person panels, was co-organised and co-funded by the Asian Bureau of Financial and Economics Research, the University of Chicago Booth School of Business, the National University of Singapore Business School and the Monetary Authority of Singapore.
