Labor's share of GDP is highest in industrialized countries

Labor share of gross domestic product (GDP), 2020

Our World
in Data

The labor share of gross domestic product (GDP) is the total compensation of employees given as a percent of GDP. It provides information about the relative share of output paid as compensation to employees, compared to the share paid to capital.

Northern America (UN)

60.5%

Labor's share of GDP is highest in industrialized countries

Labor share of gross domestic product (GDP), 2020

Our World

Expertise is what makes labor valuable
in industrialized economies

Expertise is what makes labor valuable in industrialized economies

- *Definition:* Expertise is domain-specific knowledge or competency that's needed to accomplish a particular goal

Expertise is what makes labor valuable in industrialized economies

- *Definition:* Expertise is domain-specific knowledge or competency that's needed to accomplish a particular goal
- For expertise to command a substantial market wage
 - i. The goal it enables must have market value
 - ii. The expertise must be scarce

Expertise is what makes labor valuable in industrialized economies

- *Definition:* Expertise is domain-specific knowledge or competency that's needed to accomplish a particular goal
- For expertise to command a substantial market wage
 - i. The goal it enables must have market value
 - ii. The expertise must be scarce
- Why should we care?

Non-expert work pays poorly

Crossing Guard

Median annual earnings \$31,450

Air Traffic Controller

Median annual earnings \$129,750

***The Birth of
Mass Expertise
During the
Industrial Revolution***

The 1st and 2nd Industrial Revolutions, 1760–1914

***The Computer Revolution—
Displacing Mass Expertise***

The Computer Revolution — Automating routine tasks

Jacquard loom of 1801
The first industrial computer

The Computer Revolution — Automating routine tasks

What is a computer?

- **Symbolic processor** —
Accesses, analyzes, and acts upon
information

Jacquard loom of 1801
The first industrial computer

The Computer Revolution — Automating routine tasks

What is a computer?

- **Symbolic processor** — Accesses, analyzes, and acts upon information
- **Follows rules** — Carries out codifiable, 'routine' tasks, specified in programs

Jacquard loom of 1801
The first industrial computer

The barbell of occupational polarization, 1980 — 2015

The barbell of occupational polarization, 1980 — 2015

- **At least a *trillion-fold* decline in the cost of computing since 1950!**

The barbell of occupational polarization, 1980 — 2015

- **At least a *trillion-fold* decline in the cost of computing since 1950!**
- **Computerization *automated* a large share of *mass expertise***

The barbell of occupational polarization, 1980 — 2015

- **At least a *trillion-fold* decline in the cost of computing since 1950!**
- **Computerization *automated* a large share of *mass expertise***
- **Replaced — Production workers, Office, clerical, and admin workers**

Polanyi's Paradox – Rules vs. tacit knowledge

Michael Polanyi (1891 - 1976)

Polanyi's Paradox – Rules vs. tacit knowledge

“We know more than we can tell...”

Michael Polanyi (1891 - 1976)

Polanyi's Paradox – Rules vs. tacit knowledge

“We know more than we can tell...”

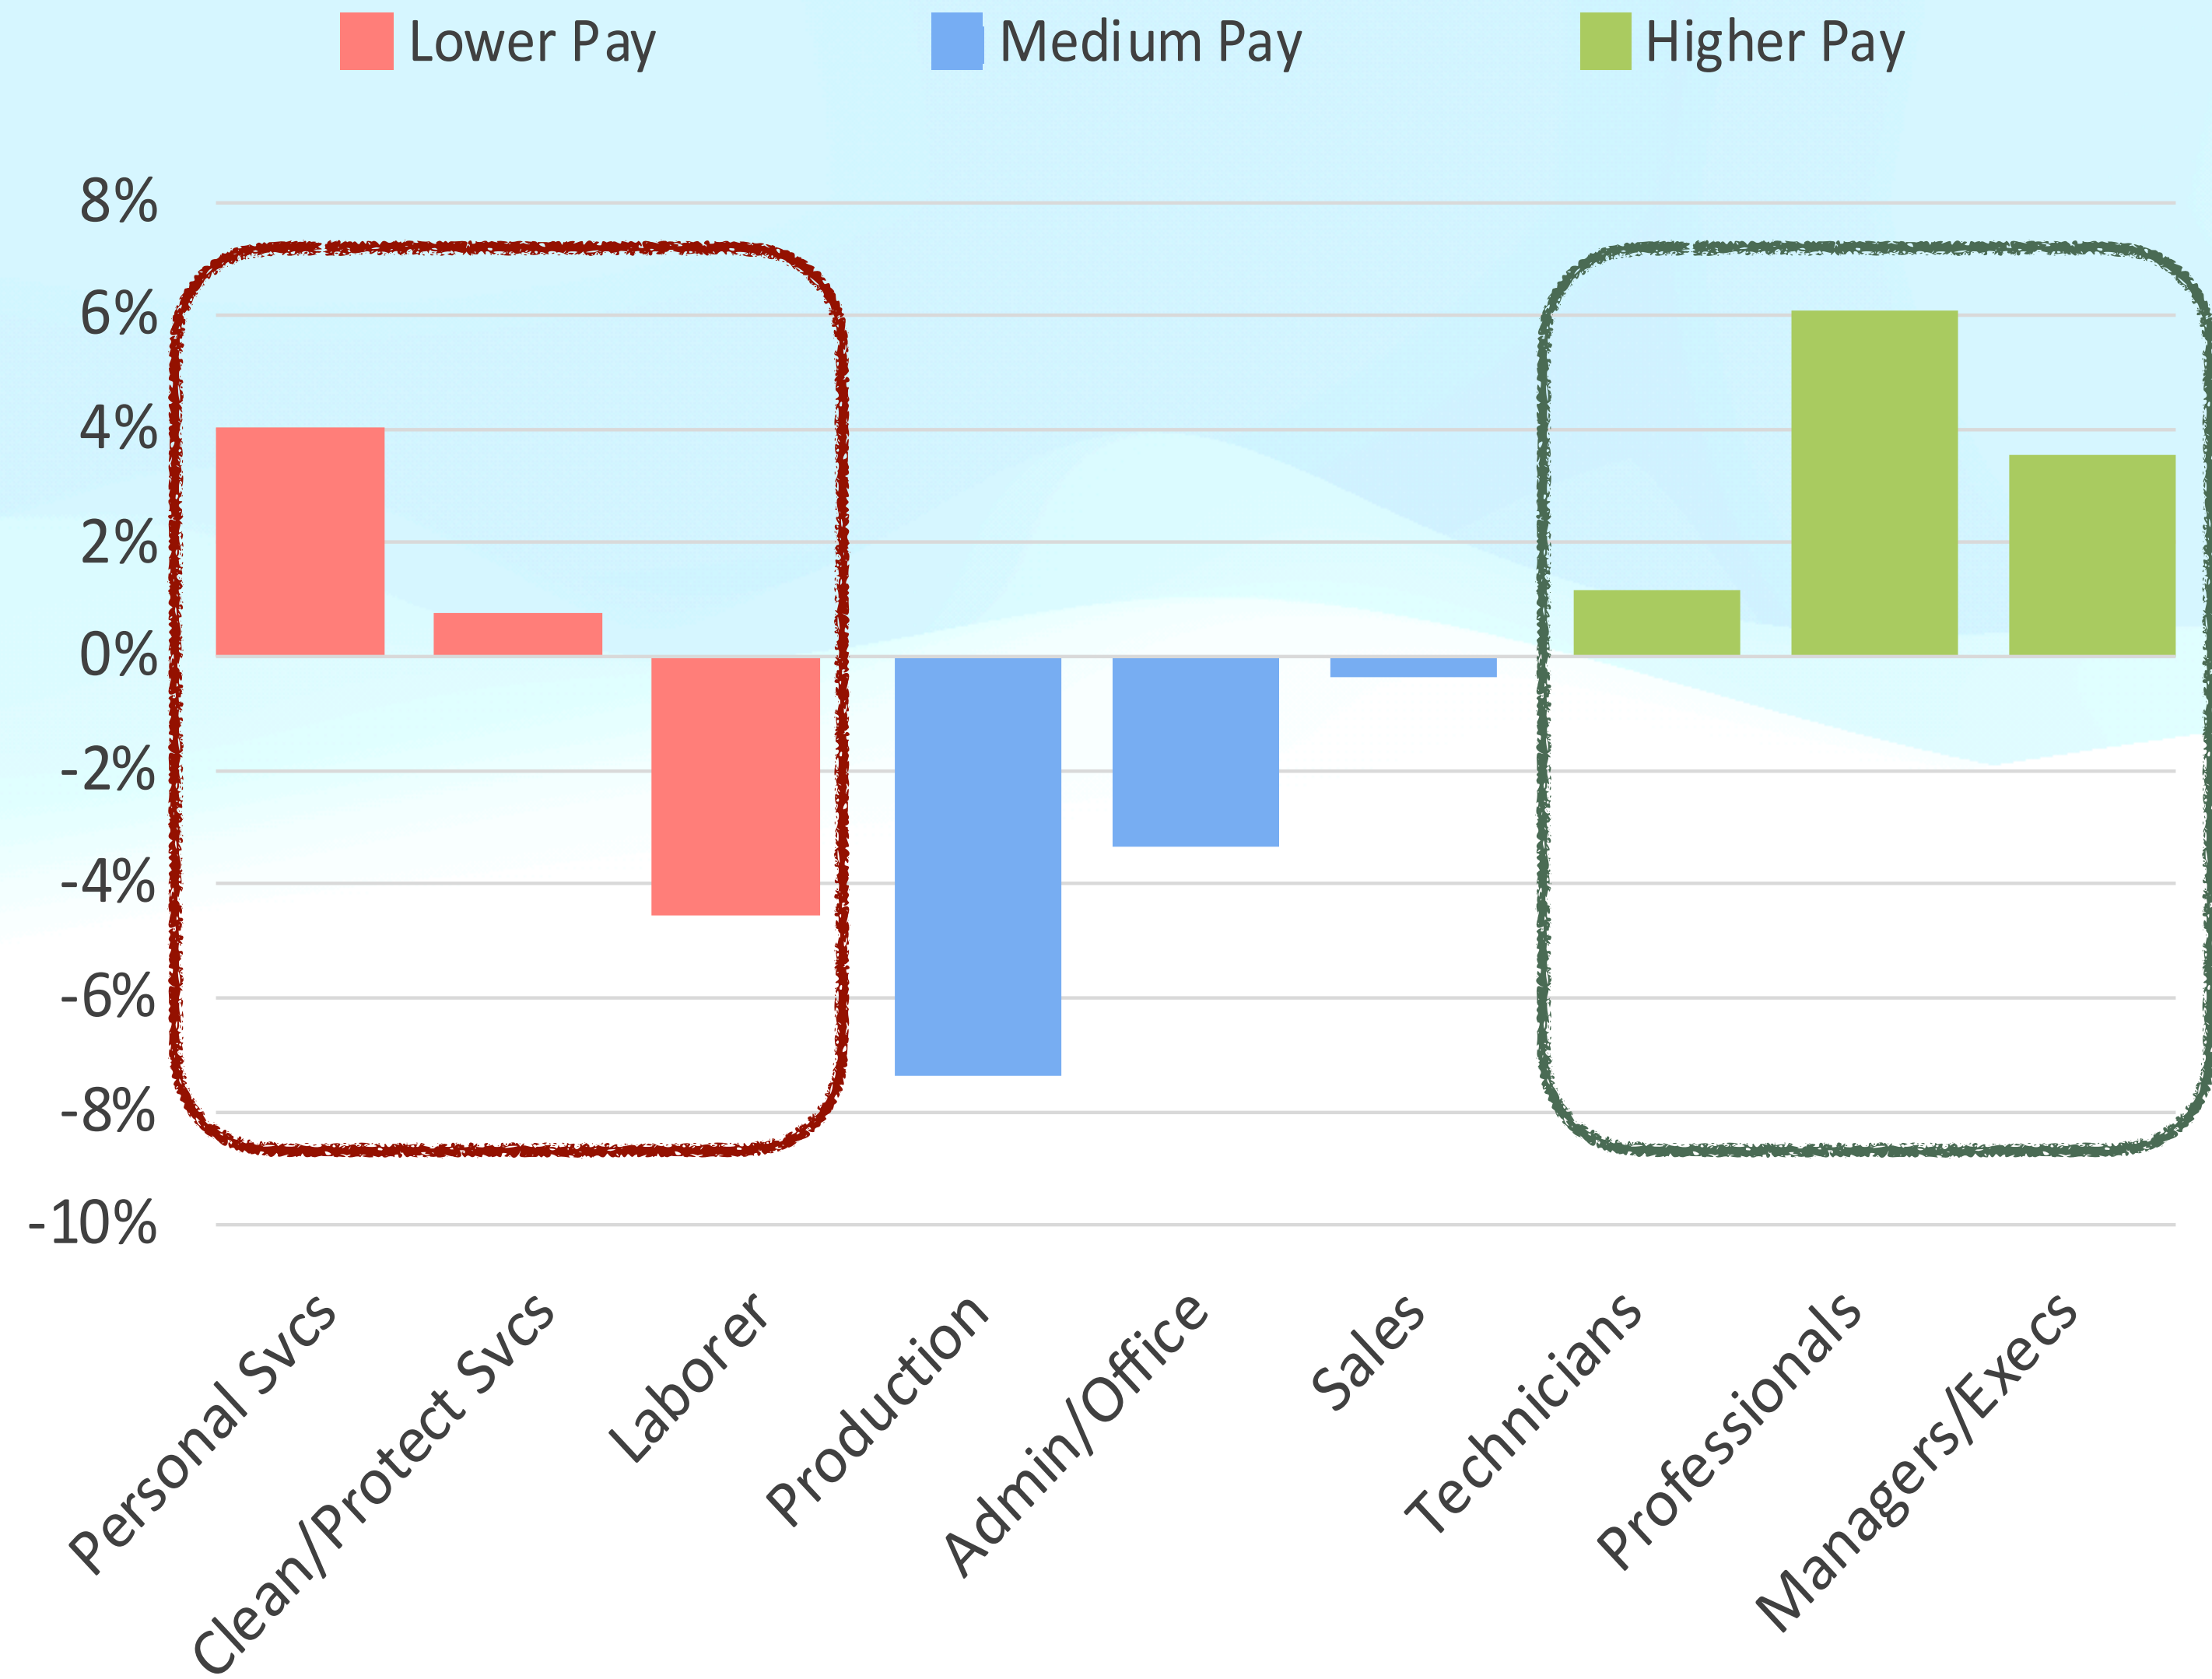

Implication — we cannot ‘computerize’ tasks that we don’t explicitly understand

Michael Polanyi (1891 - 1976)

The barbell of occupational polarization, 1980 — 2015

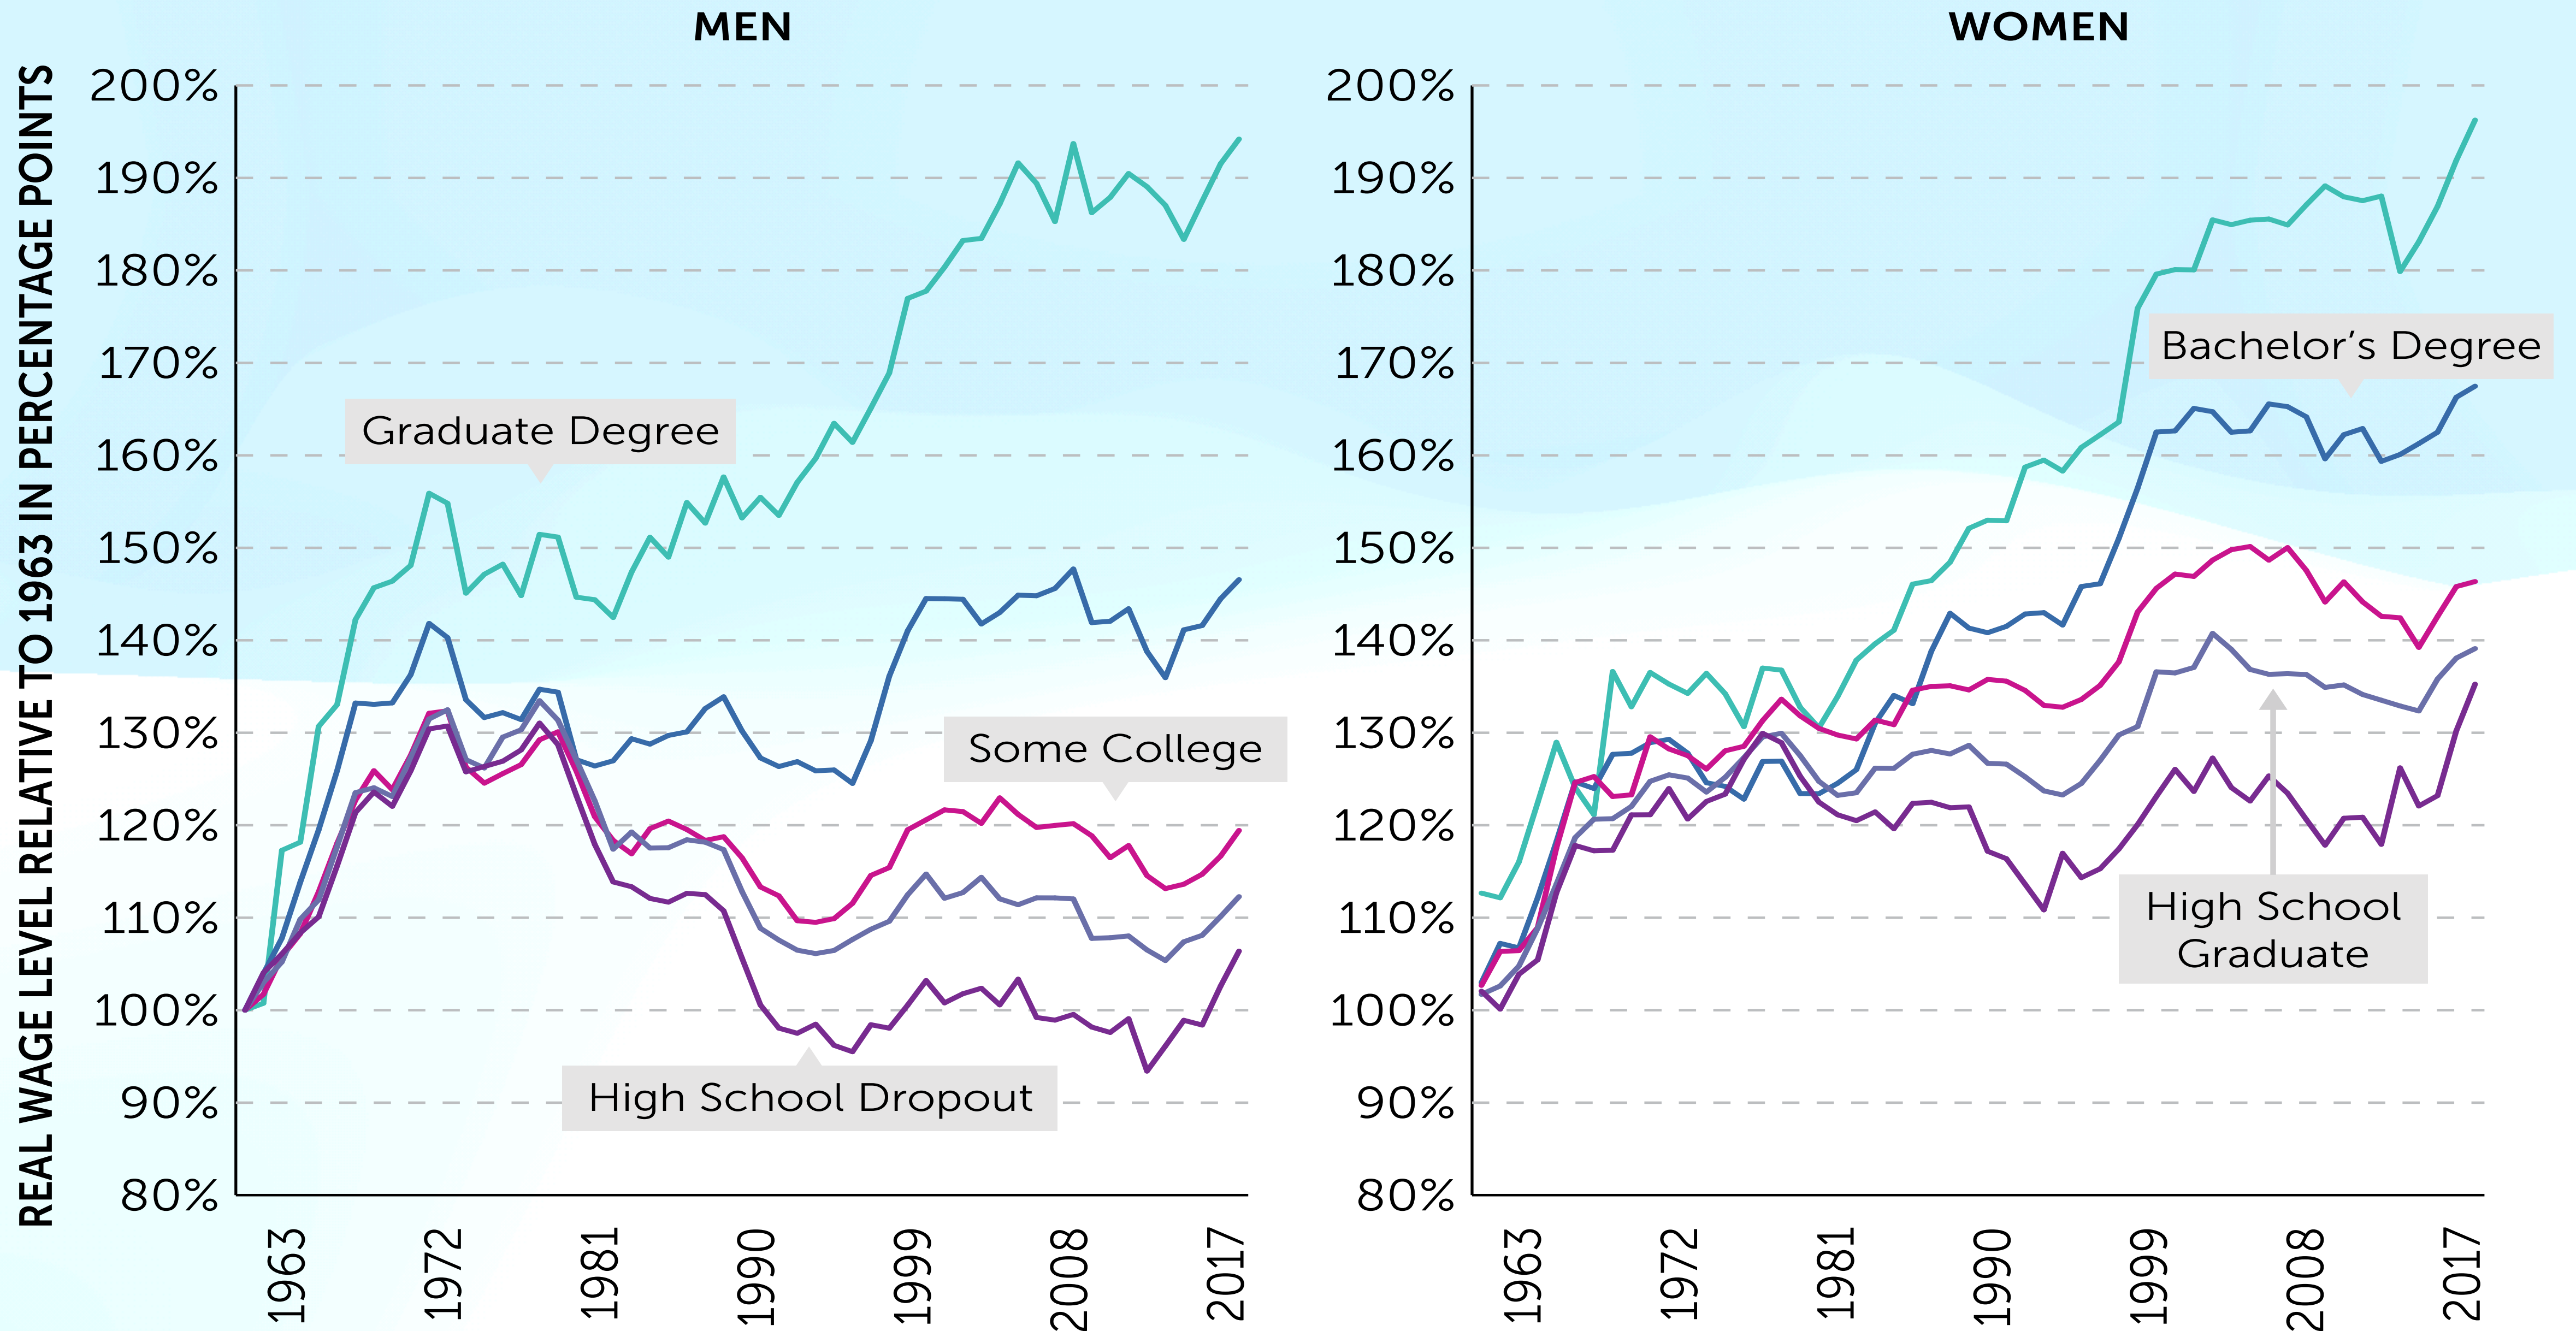

The barbell of occupational polarization, 1980 — 2015

- **Enhancing the value of elite expertise** — Doctors, lawyers, managers, engineers, researchers
- **Pushing workers in middle-skill jobs downward into non-expert work** — Food service, cleaning, security

Computerization fostered wage polarization

Critical Assessment of Protein Structure Prediction (CASP) Competition

- Competition has run annually since 1994
- 215 teams entered in 2020

IN DEPTH

Science December 2020

STRUCTURAL BIOLOGY

‘The game has changed.’ AI triumphs at protein folding

In milestone, software predictions finally match structures calculated from experimental data

“Artificial intelligence (AI) has solved one of biology’s grand challenges”

— Science, December 2020

Critical Assessment of Protein Structure Prediction (CASP) Competition

- Competition has run annually since 1994
- 215 teams entered in 2020

'The game has changed.' AI triumphs at protein folding

In milestone, software predictions finally match structures calculated from experimental data

"Artificial intelligence (AI) has solved one of biology's grand challenges"

— Science, December 2020

"This is a 50-year-old problem...I never thought I'd see this in my lifetime."

— John Moult, co-founder of the CASP

Critical Assessment of Protein Structure Prediction (CASP) Competition

- Competition has run annually since 1994
- 215 teams entered in 2020

AI is a tool

AI is a tool

- **Many tools** augment the value of human expertise, e.g., pneumatic hammer, stethoscope
- **The potential** — AI could enable workers with complementary skills to perform more expert tasks

AI is a tool

- **Many tools** augment the value of human expertise, e.g., pneumatic hammer, stethoscope
- **The potential** — AI could enable workers with complementary skills to perform more expert tasks
- **But not all tools** — London taxi drivers vs. Waze
- **The peril** — AI could commodify (*'strand'*) expertise

AI is already woven into daily life

The Peril —
Undermining
Human Expertise

Expertise delegation and expertise denigration

Air France flight #447 tail fin recovery, 2009

Expertise delegation and expertise denigration

- June 1, 2009: Pitot tubes (speed sensors) on Air France flight #447 iced over at 35K feet

Air France flight #447 tail fin recovery, 2009

Expertise delegation and expertise denigration

- June 1, 2009: Pitot tubes (speed sensors) on Air France flight #447 iced over at 35K feet
- Auto-pilot partly disengaged automatically, plane rolled

Air France flight #447 tail fin recovery, 2009

Expertise delegation and expertise denigration

- June 1, 2009: Pitot tubes (speed sensors) on Air France flight #447 iced over at 35K feet
- Auto-pilot partly disengaged automatically, plane rolled
- In the confusion, the first officer stalled the plane – a catastrophic error

Air France flight #447 tail fin recovery, 2009

Expertise delegation and expertise denigration

- June 1, 2009: Pitot tubes (speed sensors) on Air France flight #447 iced over at 35K feet
- Auto-pilot partly disengaged automatically, plane rolled
- In the confusion, the first officer stalled the plane – a catastrophic error
- During the 3.5 minutes between auto-pilot off and water collision, crew did not understand that the plane was stalling

Air France flight #447 tail fin recovery, 2009

Expertise delegation and expertise denigration

- June 1, 2009: Pitot tubes (speed sensors) on Air France flight #447 iced over at 35K feet
- Auto-pilot partly disengaged automatically, plane rolled
- In the confusion, the first officer stalled the plane – a catastrophic error
- During the 3.5 minutes between auto-pilot off and water collision, crew did not understand that the plane was stalling
- Cause: “Crew lacked experience on the characteristics of high-altitude manual flying”

Air France flight #447 tail fin recovery, 2009

Radiologists using AI — The case of CheXpert

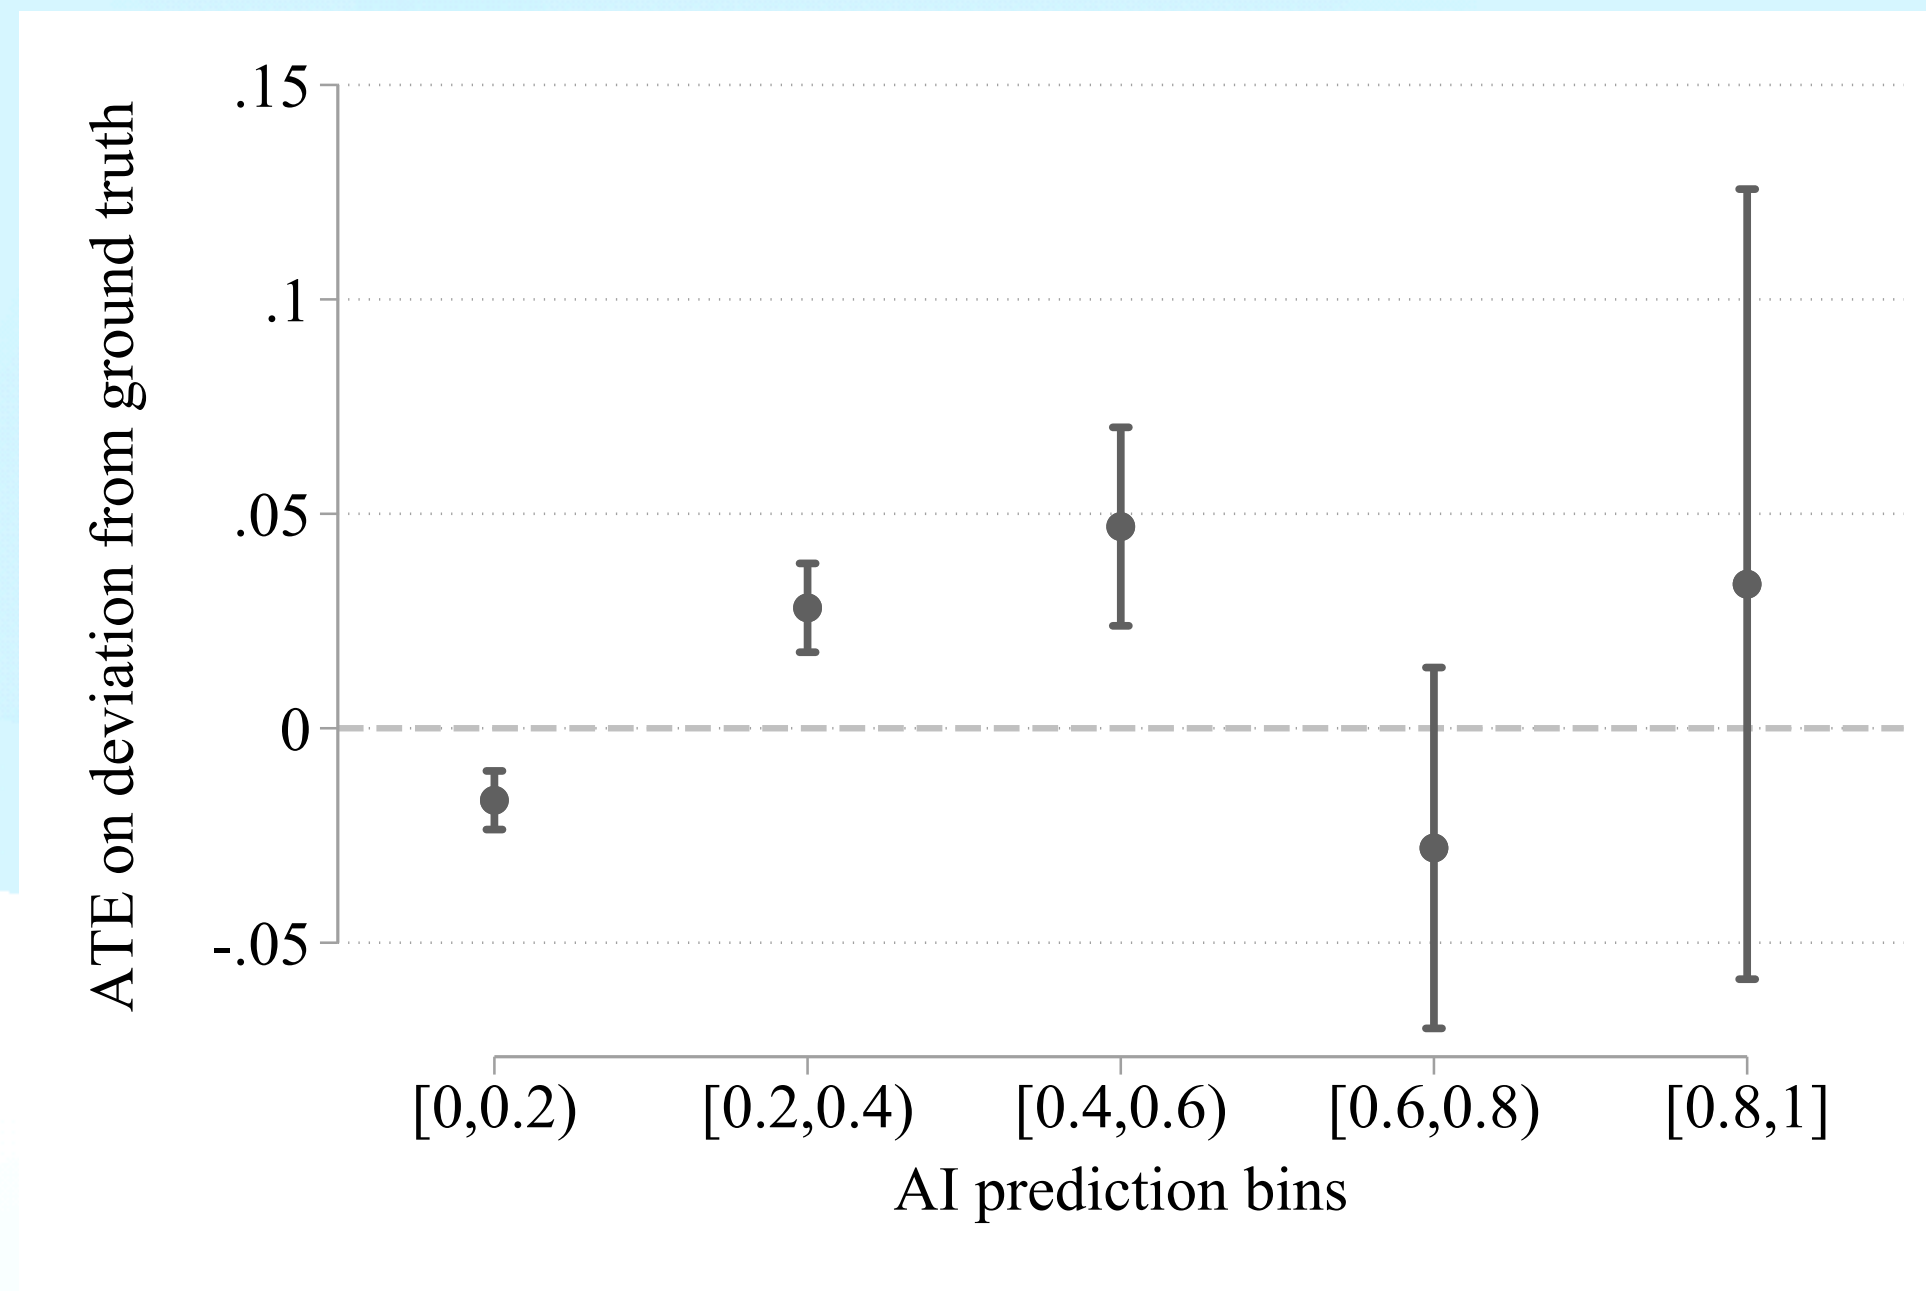

The image displays two versions of an AI radiologist interface. The top version, labeled 'b', is the CheXplain prototype. It features a patient information header (Female, 19), an urgency toggle, and buttons for 'Adjust Query' and 'Return'. The main area shows a chest X-ray with various findings highlighted by colored boxes: green for normal (Central Trachea, Clear Right Lung), red for abnormal (Support Device, Atelectasis, Cardiomegaly, Edema, Pleural Effusion), and blue for question input related (Support Device, Atelectasis, Pleural Effusion). A legend at the bottom identifies these colors. To the right, a 'Significant Observations' panel lists findings like Cardiomegaly <Likely>, Edema <Likely>, Atelectasis <Likely>, Pleural Effusion <Very Likely>, and Support Device <Definitely>. An 'Impressions' panel lists Pneumonia <Very Likely> and Congestive Heart Failure <Likely>. A 'Prior Images Across Patient' section shows three previous X-rays. A 'Pleural Effusion' section shows two images with a probability scale from 'Unlikely' to 'Definitely', with the 'Current' image positioned in the middle. The bottom version, labeled 'a', is the CheXpert interface, which is a simplified version of the CheXplain prototype.

High-fi prototyping. (a) CheXpert: AI radiologist without explanations. (b) CheXplain: The high-fidelity prototype with 8 key features.

Radiologists using AI — The case of CheXpert

Figure 3: Conditional treatment effect given AI prediction

(a) Deviation from Ground Truth

(b) Incorrect Decision

Note: Panel (a) shows the conditional average treatment effect of providing AI information on the absolute value of difference between the radiologist probability and the ground truth. Panel (b) shows analogous treatment effects on incorrect diagnosis, where a correct diagnosis is defined as the treatment recommendation matching the ground truth. Both these treatment effects are conditional on the ranges of AI prediction. Standard errors are two-way clustered at the radiologist and patient-case level. The error bars depict 95% confidence intervals. Robustness to experimental design is in appendix [C.4.1](#) and [C.4.2](#).

The Potential —
Augmenting
Human Expertise

Nurse Practitioners (NP)

Employment doubled between 2010 and 2017

Number and average annual earnings of full-time-equivalent (FTE) nurse practitioners (NPs) in the US, 2010-17

1960 Textile chemist

1970 Engineer computer application

1980 Controller, remotely-piloted vehicle

1990 Circuit layout designer

2000 Artificial intelligence specialist

2010 Technician, wind turbine

2018 Cybersecurity analyst

What is new work? New job titles captured by U.S. Census, 1940–2018

1940	Automatic welding machine operator	Acrobatic dancer
1950	Airplane designer	Tattooer
1960	Textile chemist	Pageants director
1970	Engineer computer application	Mental-health counselor
1980	Controller, remotely-piloted vehicle	Hypnotherapist
1990	Circuit layout designer	Conference planner
2000	Artificial intelligence specialist	Amusement park worker
2010	Technician, wind turbine	Sommelier
2018	Cybersecurity analyst	Drama therapist

How much new work is there?

How much new work is there?

- Employment in job titles that existed in 1940
- Employment in job titles that have been added since 1940

The questions we should be asking

The questions we should be asking

I. We will use AI to empower and extend expertise?

- Or instead to devalue expertise, displace workers?

The questions we should be asking

1. We will use AI to empower and extend expertise?

- Or instead to devalue expertise, displace workers?

2. If we want to extend expertise, how do we make that happen?

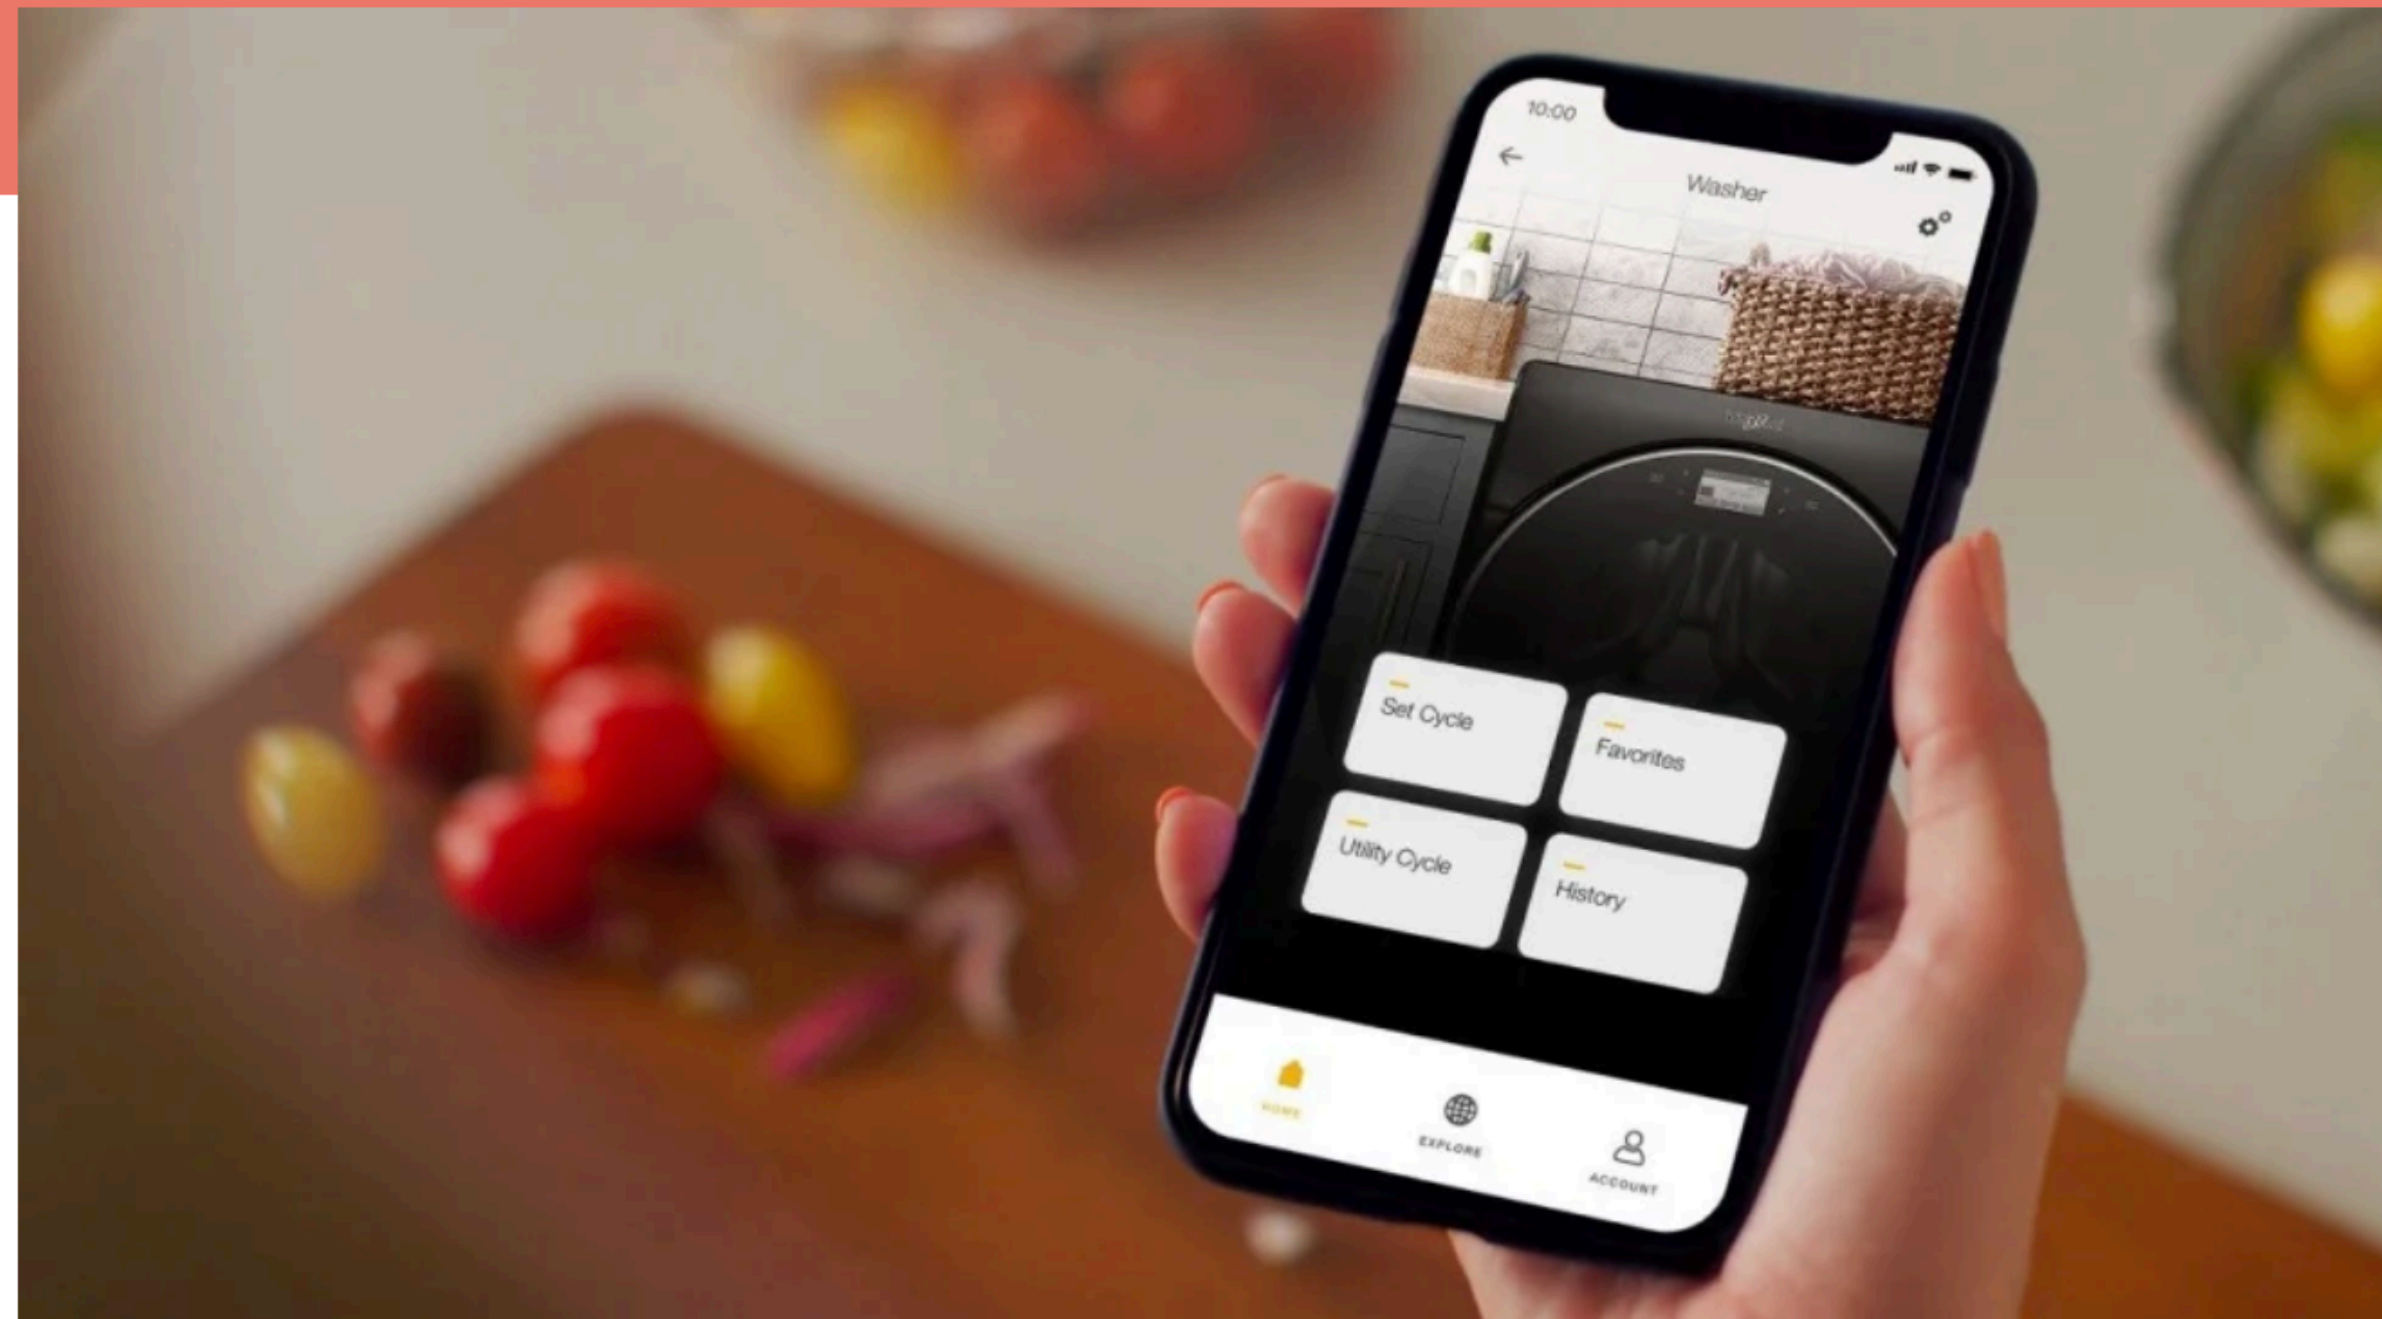

- This is an R&D opportunity — and an R&D necessity

The questions we should be asking

1. We will use AI to empower and extend expertise?
 - Or instead to devalue expertise, displace workers?
2. If we want to extend expertise, how do we make that happen?
 - This is an R&D opportunity — and an R&D necessity
3. How can industry, government, universities, trade unions shape the work of the future?
