

Banking on Sustainability: Strategic Incentives Behind Sustainability-Linked Loans

Anya Kleyменова, Xi Li, and Yinan Li

ABFER 12th Annual Conference, Singapore

20 May 2025

The views expressed in this presentation are those of the authors and do not necessarily reflect the views of the Federal Reserve Board or the Federal Reserve System.

Motivation

Banks play an important role as financial intermediaries

- Financial intermediaries provide access to credit and engage in monitoring
- Banks have increased participation in green initiatives
 - Sustainability-linked loans (SLL) were first introduced in 2017 by ING
 - The market expanded quickly, with more than 400 banks offering SLLs in more than 70 countries by 2022
 - SLLs are general-purpose loans that link pricing terms to Key Performance Indicators (KPIs)
- What drives banks' decisions to participate in this market and offer SLLs?

Research question

- What are the potential drivers?
 - Focusing on new products might allow banks to expand to new markets
 - In competitive markets, SLL deals might allow banks to provide differentiated products for sustainability-conscious borrowers
 - Regulators and policy-makers have tried to address environment and sustainability concerns
 - Banks signal their commitment to sustainability by offering new loan products
- What are the potential costs?
 - Environmental, Social, and Governance (ESG) metrics are diverse and require expertise, acquisition, and monitoring costs
 - SLLs might affect the cost of capital for banks
 - Reduced revenue due to interest rate reduction if borrowers achieve the targets

Research question

- What are the economic incentives for banks to offer SLLs?
 - Investigate which bank characteristics are associated with innovation in this market
 - Investigate how banks in different markets might be affected given product market concentration and regulatory environment
 - Provide insights into the consequences of these decisions
 - Provide an opportunity for studying the dynamics of
 - Sustainability financing
 - Banks' incentives for financial innovation

Research setting

- Focus on SLL
 - Specific loans or deals in the syndicated loan market
 - Intended to provide incentives for borrowers to meet sustainability or other ESG-related targets
 - Provides opportunities to lower the borrower's cost of financing if certain targets are achieved

Research setting: Example

- 2021 SLL agreement with Trimble Inc.
 - International technology company that provides solutions in various sectors, from agriculture to construction
 - BofA Securities (USA) Inc. and TD Securities (USA) LLC serve as co-sustainability structuring agents
 - KPI metrics are based on the greenhouse gas (GHG) emissions (Scope 1 and Scope 2) and the percentage of gender-diverse employees
 - The sustainability targets are for a 13.6% reduction in GHG emissions and a gender diversity employee percentage greater than 30%, using 2019 as the benchmark
 - The targets need to be met by 2026
 - Upon reaching the targets and after the borrower submits the pricing certificate to the sustainability agent, the applicable margin can be adjusted by up to 0.05%, and the applicable facility fee percentage can be altered by up to 0.01%

Related literature

- Emerging literature on SLLs
 - Contract design (Kim et al. 2025; Loumioti and Serafeim 2022; Carrizosa and Ghosh 2022)
 - Lenders' benefits from SLL market participation (Du et al. 2022)
- Lender monitoring of borrowers' ESG performance
 - Banks adopt certain principles and include more environmental covenants (Amiram et al. 2021)
 - Banks subject to ESG disclosure regulation change how they engage with borrowers (Wang 2023; Choy et al. 2023)
- Banks' role in financial innovation
 - Banks' incentives to innovate reflect costs and benefits of innovation and regulation (Gale 1992; Thakor 2012)
 - SLLs provide borrowers with more flexibility (Guthrie 2023)

Key findings

- Multinational banks are more likely to offer SLLs than domestic-focused banks
- Local loan market competition discourages innovation
 - Market leaders are more likely to offer SLLs
 - Likelihood diminishes as concentration increases
- ESG-reporting regulation encourages SLL offering, but does not improve future ESG ratings
- Positive association between SLLs and future market share and interest income
- SLL borrowers tend to be less risky

Data sources

- 1 Refinitiv LoanConnector DealScan
- 2 Thomson Refinitiv
- 3 FR Y-14Q
- 4 Call Reports
 - Sample period: 2016–2022
 - 1,238 distinct SLLs
 - 13,078 bank-country-year observations

Sample construction

Data

Distribution of SLLs

- The largest share of SLLs is provided by the largest multinational banks
- Large banks are active in foreign SLL markets

Bank	Bank home country	Total number of SLL led	Total volume of SLL led (\$ billions)	Total number of times acted as sustainability agent	Total number of non-ESG loans led	Total volume of non-ESG loans led (\$ billions)	Number of foreign countries led SLL	Number of foreign SLL led

Additional descriptives

Determinants of SLL deal offering

- 1 What banks and market characteristics matter for banks offering SLLs?

$$Y_{i,j,t+1} = \alpha + \beta M_{j,t} + \gamma X_{i,j,t} + \eta_j + \delta_t + \epsilon_{i,j,t+1},$$

where

- $Y_{i,j,t+1}$ = Indicator if a bank i leads at least one SLL in a borrower-country j in year $t+1$. Zero if a bank i does not lead any SLLs but leads a non-SLL syndicated loan in country j in year $t+1$
- $M_{j,t}$ = Loan market-level variables for a given borrower country lagged by one year. Includes loan market concentration measure in year t (*total_hhi*) and an indicator for whether a borrower country has any SLLs in year t (*country_year_esg_indicator*)
- $X_{i,j,t}$ = Bank-specific characteristics, including size, origin, relationship lending, sustainability-related experience, home-country ESG-related regulation, and exposure
- δ_t and η_j are *year* and *country* fixed effects
- Cluster standard errors by country and bank

Determinants of SLL deal offering

- Determinants of new SLL contracts issued to new borrowers:
 - More information frictions, higher information acquisition cost, and monitoring cost
 - Bank size, competition, experience, and home regulation are significant factors
 - Additionally, ESG coverage is not important
- Determinants of the sustainability agent role:
 - Results are similar to those for new SLL contracts issued to new borrowers
 - Larger banks are more likely to take on this role

New originations

Sustainability agents

ESG scores

Consequences of SLL offering

2 Do banks benefit from leading SLLs?

$$\text{Consequence}_{i,j,t+1} = \alpha + \beta M_{j,t} + \gamma X_{i,j,t} + \theta_i + \eta_j + \delta_{t+1} + \epsilon_{i,j,t+1},$$

where

- $\text{Consequence}_{i,j,t+1}$ = Bank i market share ($\text{first_time_market_share}_{t1}$), capturing market share through new lending, or ($\text{rel_borr_market_share}_{t1}$), capturing relationship borrowing of bank i , or ($\text{switch_borr_market_share}$), capturing non-first time borrowers that switched banks; similar specification for interest income ($\text{ln_interest_income}_{t1}$ or $\text{ln_interest} + \text{fee_income}_{t1}$) and ESG score and components
- $M_{j,t}$ = Market-specific characteristics
- $X_{i,j,t}$ = Bank-specific characteristics, including if a bank was an SLL lead or sustainability agent in year t
- θ , η , and δ are *bank*, *country*, and *year* fixed effects
- Cluster standard errors by country and bank

Descriptives

Consequences

Consequences: Market share

- Offering SLLs to local borrowers helps gain higher market power by extending more loans to relationship borrowers

Additional analyses

- Loan performance
 - Using confidential supervisory FR Y-14Q data to investigate portfolio-level performance for a subset of banks
- Breakdown data by loan using the FR Y-14Q Schedule H.1
 - Identify individual loan performance using C&I portfolio
 - Additional analyses of borrower characteristics
 - Additional analyses of bank performance
- Investigate specific case studies
- Impact on ESG ratings
- Robustness:
 - Matching
 - Incorporating more details of home regulation
 - Cross-sectional analyses

Conclusions

- Do banks introduce SLL or participate as sustainability agents to enter new markets?
 - Yes, we find evidence consistent with banks gaining market share and new customers by acting as SLL arrangers or sustainability agents
 - Do banks create new relationships?
 - Yes, banks acting as sustainability agents increase market share by lending to new borrowers
 - Foreign banks are more likely to benefit from new relationships
 - Can de-globalization explain these findings?
 - No, we find evidence of expansion in market share from foreign banks through new lending
- Banks appear to earn higher interest income and do not see significant changes in their ESG scores

Contribution

- **Interesting setting** to examine whether banks innovate in the sustainable space
- Policy relevance showing **potential incentives and tradeoffs** for banks to innovate when they enter new markets

Sample construction

Sample selection process	Remaining observations	
Raw loan-bank level data from 1.1.2006 - 12.31.2023	1128123	bank-tranche level
Filter out government borrowers	1121104	
Drop data before 2014	674927	
Keep only lead arrangers	422516	
Observations before aggregation	418703	
Aggregate to the bank-country-year-level	22948	bank-country-year level
Drop development banks, central banks, and non-bank institutions	21012	
Drop 2022 due to lack of t+1 data	18634	
Keep only observations from 2016-01-01 to 2022-12-31	13727	
Drop singletons, require each group (bank, country, year) to have at least 2 observations	13078	
Final observations	13078
